If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.**

## Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 639 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 639 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. The change is necessary to correct a minor informality. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

2. The application has been amended as follows:

Claim 6, line 3, "metal" has been changed to -- composite --.

The title has been changed as follows:

-- Dust Core with specific relationship between particle diameter and coating thickness, and Method for Producing Same --.

*End of Amendment.*

### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: None of the prior art references of record, singly or combined, teaches or suggests a composite magnetic particle comprising a metal magnetic core, an insulating inner layer and an upper layer which contains silicon and metal oxide dispersed particles wherein the metal oxide comprises at least one of silicon oxide or aluminum oxide and wherein the mean particle diameter of the metal oxide particles is between larger than 10 nm to at most twice the average coating thickness. US 2003/0077448 ("US'448", equivalent to JP 2003-303,711) teaches a composite magnetic particle of low core loss having the same layered structure as claimed; however, the US'448 reference does not teach the relationship between the mean particle diameter of metal oxide dispersed particles and the coating thickness. As shown in the examples and comparative examples in the instant specification, when the mean particle diameter of dispersed particles is outside the claimed range, the iron loss value is too high to be measurable (Table 1). US 6,102,980 ("US' 980", equivalent to JP 10-335,128) teaches a magnetic core comprising dispersed particles of titania and zirconia and heat-resistant resin, wherein the dispersed particles have a mean particle size of 10 nm to 100 nm. It would not have been obvious to combine US'448 with US'980 to arrive at the claimed invention because the dispersed particles as taught in the US'980 and the heat-resistant resin do not form a coating layer but rather form a component of the ferromagnetic dust core. In addition, it would not have been obvious to replace titania or zirconia with alumina or silica. Further, like US'448, US'980 does not recognize the critical relationship between

Art Unit: 1794

the dispersed particles and the total coating thickness because US'980 fails to teach a coating.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to H. (Holly) T. Le whose telephone number is 571-272-1511. The examiner can normally be reached on 12:30 p.m. to 9:00 p.m. (EST), Mondays to Fridays.
